

Dear colleagues, chamaeleon researchers, enthusiasts & friends, the site Chameleons.info develops faster than expected! I am very happy to announce that!

It gains on content, volume, quality and on attention - Thank you all for your interest, cooperation and support! My goal is to provide a platform for you serving as a base of interesting, inspiring and reliable information on chameleons. Please feedback me in what an extent I succeed...

CHAMELEONS.INFO

This site is made for the good of chamaeleonkind and mankind. It is dedicated to chamaeleons to secure their their existence in the wild and to provide information and inspiration, fostering their wellness and thriving in captivity... As the existence of chamaeleons as a family is directly and indirectly tied with trees, it is important to care for trees as well and this way to care for the whole planet.

The site has a simple, logical structure.

We put lots of effort into making the pages more useful for you and one of the greatest achievement is to build up a nice representative gallery of several hundreds of interesting photographs depicting the diversity of chamaeleon species. Enjoy studying the individual taxa and get inspired by their beauty. The galleries are logically structured into three separate sub-galleries:

- **INDIGENOUS CHAMELEONS**

Chameleons living in the wild in areas, which they inhabit naturally: from Africa and Madagascar to Sri Lanka and India. We have pictures of species that are unique and never seen before by anyone including some undescribed taxa.

- **FERAL CHAMELEONS**

Chameleons inhabiting territories to which they have been introduced by humans: sometimes centuries ago like the populations of the European Chameleon (*Chamaeleo chamaeleon*) in Spain, Portugal and Malta or decades like in the almost half century ago case of introduction of the Jackson's chameleon (*Trioceros jacksonii*) to Hawaii or in recent years like the feral populations of Yemen, Panther and Oustalet's Chameleons (*Chamaeleo calyptratus*, *Furcifer pardalis* and *oustaleti*) in Florida. We have a unique collection of feral panthers from Florida!

- **CAPTIVE CHAMELEONS**

Chameleons living and born in captivity from the commonly kept and bred species to absolute rarities like *Trioceros pfefferi* or *Calumma malthe*!

OUR MAIN FOCUS IS:

GALLERIES

To show more diversity and beauty.

QUIZZES

To entertain you and give you opportunity to check the level of your knowledge.

VIDEOS

To inspire you by educational videos on valid topics.

CHAMELEON VOYAGES

To offer you a rare option of joining me on some research trips.

NEW POSTS

To provide new info for your reference and growth.

EXPEDITIONS

I plan an expedition in June to Florida to study the feral populations of chameleons there: still some places free - reserve if you are interested!

I plan two unique expeditions in near future to places, that are not easy to access without exact local knowledge:

- **TANZANIA** - The Chameleons of Eastern Arc (or Arch?)
- **MADAGASCAR** - The unknown chameleons of the North

Stay in touch and check the announcement to reserve a place!

Please enjoy this page and use it for your reference and inspiration!

All info is available in easy to read and downloadable form to serve mankind and chameleonkind to make this planet a better place to live.
