#### TEMPERATURE (°C)

#### RELATIVE AIR HUMIDITY (%)

#### UV INDEX (#\*)

#### WIND SPEED (m/s) PROBABILITY OF RAIN\*\* PROBABILITY OF FOG\*\*\*

\* Dependent on cloud cover (reduced to 0-4), the real exposure depends on the presence/absence of blocking environmental elements (in bush 0,5-2)

\*\* It is probable that it will rain in this period, but it is very volatile

\*\*\* It is probable that the dew point will be close to the temperature and that low clouds/fog will form
